

# PIPELINE

The Intelligent Beer line Cleaner

Pipeline, the intelligent beer line cleaner is coloured - for safety - so the cellarperson can see the cleaning fluid in the line and avoid accidental ingestion. It is also safer to use than caustic soda-based line cleaners as it will not burn like caustic soda does. Unattended, it could stain clothes but it will not rot them like caustic cleaners will.

**Low chlorine**  
content reduces damage  
to lines, and will  
not taint the beer

**1** Draw the solution through...once purple at the head leave for just **5 Minutes**

**2** After **5 minutes** the line will change colour. Pull more Pipeline through and leave for another **5 minutes**

**3** If the line is still purple it is clean, if the colour change persists repeat the **5 minutes** soak(s) until it stays purple...

If it's NOT purple...  
it's NOT right!

Just **one pint of water** to rinse the Pipeline out as opposed to the traditional 2 or 3 gallons of water to flush out a caustic soda-based line cleaner. Pipeline can save an average of 2 gallons per line. So, the clinching question is: "Do you have a water meter?"

Pipeline Rinse Water Test Papers will assure you of the water purity.

Order Pipeline- the intelligent beer line cleaner - today.

No Caustic Soda  
so it makes the  
process quicker and  
easier for you.
